EAA declares the San Antonio Pool has exited Critical Period Stage Restrictions

San Antonio, TX – Today, the Edwards Aquifer Authority (EAA) staff confirmed that the ten-day rolling average at J-17 is 660.4 ft msl, which is above the threshold for Stage I within the San Antonio Pool. Therefore, this has met the criteria to end Stage I Critical Period Management for the San Antonio Pool. This determination was based on the water level measurement from J-17.

The EAA is a regional water management agency that manages, enhances and protects the Edwards Aquifer a major groundwater system serving approximately 2 million South Central Texans. The EAA jurisdiction spans across 8 counties including Uvalde, Medina, Bexar, and parts of Atascosa, Caldwell, Guadalupe, Comal and Hays counties.
