## Narrative

### Job Narrative 560-63976-1

#### Revised Report 1 10-19-2016

The client requested a change for the units for 8260, 8141 and 6020. No other changes were made.

#### Receipt

The samples were received on 9/27/2016 8:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 10 coolers at receipt time were 1.4° C, 1.4° C, 1.6° C, 2.0° C, 2.2° C, 2.2° C, 2.2° C, 3.0° C, 4.0° C and 4.6° C.

#### Receipt Exceptions

The following Trip Blank sample was received with headspace in 2 of 2 vial(s): TB13 (560-63976-11).

One container for the following sample was broken in handling: HCS270 Peak (560-63976-10).

#### GC/MS VOA

Method 8260: Percent recovery results for the MS/MSD pair, the MS or the MSD associated with batch 132164 were outside acceptable limits for Ethylene oxide. The LCS was within acceptable limits. Therefore, data are reported.

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### GC/MS Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### GC Semi VOA

Method 8141A: The grand mean exception, as outlined in EPA method 8000B, was applied to the continuing calibration verification (CCV) standard associated with batch 280-345644 for several compounds. This rule states that when one or more compounds in the CCV fail to meet acceptance criteria, the initial calibration (ICAL) may be used for quantitation if the average %D (the grand mean) of all the compounds in the CCV is less than or equal to 15%D with no single %D more than 30%. All associated samples are ND for the affected compounds. Both surrogates are well in control on both columns and not affected by any bias.

CCV1 (front) Chlormefos -19% AVE=5.2 (back) Dichlorvos +16% Merphos -17% AVE=9.6

MB, LCS, 560-63976-1, -2, -3, -4, -5, 560-63977-1, -2, -3, -4, -5

CCV2 (front) OK (back) Tokuthion -16% Trichloronate -16% Azinphos-methyl -16% Chlormefos -16% Methyl parathion -16% AVE=13.2

560-63995-1, 560-64002-2, MS, MSD, -3, -4, -5, -6, -12, -13

CCV3 (front) Dichlorvos +18% AVE=9.4 (back) Azinphos-methyl -20% Dichlorvos +20% AVE=12.6

Method 8141A: The continuing calibration verification (CCV) associated with batch 280-345644 recovered outside acceptance criteria, low biased, for Naled. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

560-64002-2, MS, MSD, -3, -4, -5, -6, 12-, -13

CCV3 (front) Naled -46% (back) Naled -50%

Method 8141A: The initial calibration verification (ICV) for Mevinphos associated with analytical batch 280-345644 recovered below the lower control limit on the back/confirmation column. The samples associated with this ICV were non-detects for the affected analytes; therefore, the data have been reported from the front/primary column which is in control.

ICV (front) OK (back) Mevinphos -21%

Method 8141A: The Chlormefos surrogate recovery for the following sample in preparation batch 280-344653 and analytical batch 280-345644 was outside acceptance limits (low biased) on the back/confirmation column: (560-64002-Q-2-A MS). The recovery is within acceptance limits on the other column, indicating that the extraction process was in control. The bracketing CCV for Chlormefos recovered below the lower limit but the surrogate is in control on the same column without bias. The sample is a matrix spike and all spiked compounds are well in control on both columns.

Method 8082A: 2 surrogates are used for this analysis. The laboratory's SOP allows 1 of these surrogates to be outside acceptance

criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: (MB 560-132158/1-A). These results have been reported and qualified.

Method 8081B: The following continuing calibration verification (CCV) associated with batch 560-132177 recovered above the upper control limit for toxaphene: (CCV 560-132177/4). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8081B: 2 surrogates are used for this analysis. The laboratory's SOP allows 1 of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: (MB 560-132158/1-A). These results have been reported and qualified.

Method 8151: Percent recovery results for the MS/MSD pair, the MS or the MSD associated with batch 452263 were outside acceptable limits for Dalapon. The LCS was within acceptable limits. Therefore, data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### Metals

Method 6010B: The method blank for preparation batch 560-132189 and analytical batch 560-132326 contained Na and Sr above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method 6010: Percent recovery results for the MS/MSD pair, the MS or the MSD associated with batch 132326 and prep batch 132189 were outside acceptable limits for Sodium. The LCS was within acceptable limits. Therefore, data are reported.

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

### General Chemistry

Method 9040C: This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The following samples have been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe. 560-63976-1-10

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### Organic Prep

Method 3510C: The following samples were spiked with a unverified standards.

8141 Surr\_00079 & 8141 LCS\_000112

HCS210 Lead (560-63976-1), HCS240 Lead (560-63976-2), HCS250 Lead (560-63976-3), HCS260 Lead (560-63976-4) and HCS270 Lead (560-63976-5)

preparation batch 280-344653.

3510C 8141A

344653

Method 3510C: The following samples formed emulsions during the extraction procedure: HCS210 Lead (560-63976-1), HCS240 Lead (560-63976-2), HCS250 Lead (560-63976-3), HCS260 Lead (560-63976-4) and HCS270 Lead (560-63976-5). The emulsions were broken up using a pour back method on all three extractions.

preparation batch 280-344653.

3510C 8141A

344653

Method 3520C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 560-132246.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### Narrative

#### Job Narrative 560-63977-1

#### Revised Report 1 10-19-2016

The client requested a change for the units for 8260, 8141 and 6020. No other changes were made.

#### Receipt

The samples were received on 9/27/2016 8:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 5 coolers at receipt time were 0.2° C, 0.6° C, 0.8° C, 1.0° C and 2.6° C.

#### Receipt Exceptions

<For sample 5, "HCS270 Peak 2" only 2 HCL voa vials were recieved even though it should have been 3.>

#### GC/MS VOA

Method 8260: Percent recovery results for the MS/MSD pair, the MS or the MSD associated with batch 132164 were outside acceptable limits for Ethylene oxide. The LCS was within acceptable limits. Therefore, data are reported.

No additional analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### GC/MS Semi VOA

Method 820: Percent recovery results for the MS/MSD pair, the MS or the MSD associated with batch 132347 were outside acceptable limits for various analytes. The LCS was within acceptable limits. Therefore, data are reported.

No additional analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### GC Semi VOA

Method 8141A: The grand mean exception, as outlined in EPA method 8000B, was applied to the continuing calibration verification (CCV) standard associated with batch 280-345644 for several compounds. This rule states that when one or more compounds in the CCV fail to meet acceptance criteria, the initial calibration (ICAL) may be used for quantitation if the average %D (the grand mean) of all the compounds in the CCV is less than or equal to 15%D with no single %D more than 30%. All associated samples are ND for the affected compounds. Both surrogates are well in control on both columns and not affected by any bias.

CCV1 (front) Chlormefos -19% AVE=5.2 (back) Dichlorvos +16% Merphos -17% AVE=9.6

MB, LCS, 560-63976-1, -2, -3, -4, -5, 560-63977-1, -2, -3, -4, -5

CCV2 (front) OK (back) Tokuthion -16% Trichloronate -16% Azinphos-methyl -16% Chlormefos -16% Methyl parathion -16% AVE=13.2

560-63995-1, 560-64002-2, MS, MSD, -3, -4, -5, -6, -12, -13

CCV3 (front) Dichlorvos +18% AVE=9.4 (back) Azinphos-methyl -20% Dichlorvos +20% AVE=12.6

Method 8141A: The continuing calibration verification (CCV) associated with batch 280-345644 recovered outside acceptance criteria, low biased, for Naled. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

560-64002-2, MS, MSD, -3, -4, -5, -6, 12-, -13

CCV3 (front) Naled -46% (back) Naled -50%

Method 8141A: The initial calibration verification (ICV) for Mevinphos associated with analytical batch 280-345644 recovered below the lower control limit on the back/confirmation column. The samples associated with this ICV were non-detects for the affected analytes; therefore, the data have been reported from the front/primary column which is in control.

ICV (front) OK (back) Mevinphos -21%

Method 8141A: The Chlormefos surrogate recovery for the following sample in preparation batch 280-344653 and analytical batch 280-345644 was outside acceptance limits (low biased) on the back/confirmation column: (560-64002-Q-2-A MS). The recovery is within acceptance limits on the other column, indicating that the extraction process was in control. The bracketing CCV for Chlormefos recovered below the lower limit but the surrogate is in control on the same column without bias. The sample is a matrix spike and all spiked compounds are well in control on both columns.

Method 8082A: 2 surrogates are used for this analysis. The laboratory's SOP allows 1 of these surrogates to be outside acceptance

criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: (MB 560-132158/1-A). These results have been reported and qualified.

Method 8081B: The following continuing calibration verification (CCV) associated with batch 560-132177 recovered above the upper control limit for toxaphene: (CCV 560-132177/4). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8081B: 2 surrogates are used for this analysis. The laboratory's SOP allows 1 of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: (MB 560-132158/1-A). These results have been reported and qualified.

Method 8151: Percent recovery results for the MS/MSD pair, the MS or the MSD associated with batch 452263 were outside acceptable limits for Dalapon. The LCS was within acceptable limits. Therefore, data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Metals

Method 6010B: The method blank for preparation batch 560-132189 and analytical batch 560-132326 contained Na and Sr above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

Method 6010: Percent recovery results for the MS/MSD pair, the MS or the MSD associated with prep batch 132189 were outside acceptable limits for Sodium. The LCS was within acceptable limits. Therefore, data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### General Chemistry

Method 9040C: This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The following samples has been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe. 560-63977-1-5

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### Narrative

#### Job Narrative 560-64002-1

#### Revised Report 1 10-19-2016

The client requested a change for the units for 8260, 8141 and 6020. No other changes were made.

#### Receipt

The samples were received on 9/28/2016 8:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 8 coolers at receipt time were 2.1° C, 2.3° C, 2.4° C, 2.6° C, 2.7° C, 2.8° C, 2.8° C and 3.0° C.

#### GC/MS VOA

Method 8260: The relative percent deviation (RPD) was outside acceptable limits for 1, 4-Dioxane in the MS/MSD pair associated with batch 132278. The LCS was within acceptable limits. Therefore, data are reported.

Method 8260: The relative percent deviation (RPD) was outside acceptable limits for 1, 4-Dioxane in the MS/MSD pair associated with batch 132278. The LCS was within acceptable limits. Therefore, data are reported.

Method 8260: Percent recovery results for the MS/MSD pair, the MS or the MSD associated with batch 132311 were outside acceptable limits for various analytes. The LCS was within acceptable limits. Therefore, data are reported.

Method 8260: The relative percent deviation (RPD) was outside acceptable limits for Ethylene oxide in the MS/MSD pair associated with batch 132311. The LCS was within acceptable limits. Therefore, data are reported.

No additional analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### GC/MS Semi VOA

Method 8260: Percent recovery results for the MS/MSD pair, the MS or the MSD associated with batch 132347 were outside acceptable limits for various analytes. The LCS was within acceptable limits. Therefore, data are reported.

No additional analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### GC Semi VOA

Method 8141A: The grand mean exception, as outlined in EPA method 8000B, was applied to the continuing calibration verification (CCV) standard associated with batch 280-345644 for several compounds. This rule states that when one or more compounds in the CCV fail to meet acceptance criteria, the initial calibration (ICAL) may be used for quantitation if the average %D (the grand mean) of all the compounds in the CCV is less than or equal to 15%D with no single %D more than 30%. All associated samples are ND for the affected compounds. Both surrogates are well in control on both columns and not affected by any bias.

CCV1 (front) Chlormefos -19% AVE=5.2 (back) Dichlorvos +16% Merphos -17% AVE=9.6

MB, LCS, 560-63976-1, -2, -3, -4, -5, 560-63977-1, -2, -3, -4, -5

CCV2 (front) OK (back) Tokuthion -16% Trichloronate -16% Azinphos-methyl -16% Chlormefos -16% Methyl parathion -16% AVE=13.2

560-63995-1, 560-64002-2, MS, MSD, -3, -4, -5, -6, -12, -13

CCV3 (front) Dichlorvos +18% AVE=9.4 (back) Azinphos-methyl -20% Dichlorvos +20% AVE=12.6

Method 8141A: The continuing calibration verification (CCV) associated with batch 280-345644 recovered outside acceptance criteria, low biased, for Naled. A reporting limit (RL) standard was analyzed, and the target analyte was detected. Since the associated samples were non-detect for this analyte, the data have been reported.

560-64002-2, MS, MSD, -3, -4, -5, -6, -12, -13

CCV3 (front) Naled -46% (back) Naled -50%

Method 8141A: The initial calibration verification (ICV) for Mevinphos associated with analytical batch 280-345644 recovered below the lower control limit on the back/confirmation column. The samples associated with this ICV were non-detects for the affected analytes; therefore, the data have been reported from the front/primary column which is in control.

ICV (front) OK (back) Mevinphos -21%

Method 8141A: The Chlormefos surrogate recovery for the following samples in preparation batch 280-344653 and analytical batch

280-345644 was outside acceptance limits (low biased) on the front/primary column: HCS260 Trail (560-64002-5), FDHCS260 Trail (560-64002-6), HCS270 Trail (560-64002-12) and FDHCS270 Trail (560-64002-13). The recovery is within acceptance limits on the other column, indicating that the extraction process was in control.

Method 8141A: The Chlormefos surrogate recovery for the following sample in preparation batch 280-344653 and analytical batch 280-345644 was outside acceptance limits (low biased) on the back/confirmation column: HCS210 Trail (560-64002-2[MS]). The recovery is within acceptance limits on the other column, indicating that the extraction process was in control. The bracketing CCV for Chlormefos recovered below the lower limit but the surrogate is in control on the same column without bias. The sample is a matrix spike and all spiked compounds are well in control on both columns.

Method 8081B: The following continuing calibration verification (CCV) associated with batch 560-132295 recovered above the upper control limit for toxaphene: (CCV 560-132295/4). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8151: Percent recovery results for the MS/MSD pair, the MS or the MSD associated with batch 452263 were outside acceptable limits for Dalapon. The LCS was within acceptable limits. Therefore, data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### General Chemistry

Method 9040C: This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The following samples have been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe. 560-64002-2, 3, 4, 5, 6, 12 and 13.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Organic Prep

Method 3510C: The following samples were spiked with a unverified standards.

8141 Surr\_00079 & 8141 LCS\_000112

## Notes and Definitions

Item	Definition
MS-02	The RPD and/or percent recovery for this QC spike sample cannot be accurately calculated due to the high concentration of analyte inherent in the sample.
ND	NOT DETECTED at or above the Method Reporting Limit (MRL). If Method Detection Limit (MDL) is reported, then ND means not detected at or above the MDL.
Dil	Dilution
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
% Rec	Percent Recovery
Source	Sample that was matrix spiked or duplicated.
MDL	Method Detection Limit
MRL	The minimum levels, concentrations, or quantities of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. The MRL is also known as Limit of Quantitation (LOQ) and Detection Limit for Reporting (DLR)
MDA	Minimum Detectable Activity
NR	Not Reportable
TIC	Tentatively Identified Compound (TIC) using mass spectrometry. The reported concentration is relative concentration based on the nearest internal standard. If the library search produces no matches at, or above 85%, the compound is reported as unknown.

Any remaining sample(s) will be disposed of one month from the final report date unless other arrangements are made in advance.

An Absence of Total Coliform meets the drinking water standards as established by the California State Water Resources Control Board (SWRCB)

All results are expressed on wet weight basis unless otherwise specified.

All samples collected by Weck Laboratories have been sampled in accordance to laboratory SOP Number MIS 002.

## Notes and Definitions

Item	Definition
MS-02	The RPD and/or percent recovery for this QC spike sample cannot be accurately calculated due to the high concentration of analyte inherent in the sample.
ND	NOT DETECTED at or above the Method Reporting Limit (MRL). If Method Detection Limit (MDL) is reported, then ND means not detected at or above the MDL.
Dil	Dilution
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
% Rec	Percent Recovery
Source	Sample that was matrix spiked or duplicated.
MDL	Method Detection Limit
MRL	The minimum levels, concentrations, or quantities of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. The MRL is also known as Limit of Quantitation (LOQ) and Detection Limit for Reporting (DLR)
MDA	Minimum Detectable Activity
NR	Not Reportable
TIC	Tentatively Identified Compound (TIC) using mass spectrometry. The reported concentration is relative concentration based on the nearest internal standard. If the library search produces no matches at, or above 85%, the compound is reported as unknown.

Any remaining sample(s) will be disposed of one month from the final report date unless other arrangements are made in advance.

An Absence of Total Coliform meets the drinking water standards as established by the California State Water Resources Control Board (SWRCB)

All results are expressed on wet weight basis unless otherwise specified.

All samples collected by Weck Laboratories have been sampled in accordance to laboratory SOP Number MIS 002.

## Notes and Definitions

Item	Definition
MS-02	The RPD and/or percent recovery for this QC spike sample cannot be accurately calculated due to the high concentration of analyte inherent in the sample.
ND	NOT DETECTED at or above the Method Reporting Limit (MRL). If Method Detection Limit (MDL) is reported, then ND means not detected at or above the MDL.
Dil	Dilution
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
% Rec	Percent Recovery
Source	Sample that was matrix spiked or duplicated.
MDL	Method Detection Limit
MRL	The minimum levels, concentrations, or quantities of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. The MRL is also known as Limit of Quantitation (LOQ) and Detection Limit for Reporting (DLR)
MDA	Minimum Detectable Activity
NR	Not Reportable
TIC	Tentatively Identified Compound (TIC) using mass spectrometry. The reported concentration is relative concentration based on the nearest internal standard. If the library search produces no matches at, or above 85%, the compound is reported as unknown.

Any remaining sample(s) will be disposed of one month from the final report date unless other arrangements are made in advance.

An Absence of Total Coliform meets the drinking water standards as established by the California State Water Resources Control Board (SWRCB)

All results are expressed on wet weight basis unless otherwise specified.

All samples collected by Weck Laboratories have been sampled in accordance to laboratory SOP Number MIS 002.

#### GC/MS VOA

Method 8260B: The matrix spike / matrix spike duplicate (MS/MSD) precision for analytical batch 560-125954 was outside control limits for ethylene oxide. Sample matrix interference is suspected because the associated laboratory control sample (LCS) was within acceptance limits.

Method 8260B: The relative percent deviation (RPD) was outside acceptable limits for Ethylene oxide in the MS/MSD pair associated with sample 560-60183-24. The LCS was within acceptable limits. Therefore, data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC/MS Semi VOA

Method 8270C: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for preparation batch 560-126050 and analytical batch 560-126070 were outside control limits for various analytes.
