### Notes and Definitions

<b>MS-02</b>	The RPD and/or percent recovery for this QC spike sample cannot be accurately calculated due to the high concentration of analyte inherent in the sample.
<b>E-01</b>	The concentration indicated for this analyte is an estimated value above the calibration range.
<b>ND</b>	NOT DETECTED at or above the Method Reporting Limit (MRL). If Method Detection Limit (MDL) is reported, then not detected at or above the MDL.
<b>NR</b>	Not Reportable
<b>Dil</b>	Dilution
<b>dry</b>	Sample results reported on a dry weight basis
<b>RPD</b>	Relative Percent Difference
<b>% Rec</b>	Percent Recovery
<b>Sub</b>	Subcontracted analysis, original report available upon request
<b>MDL</b>	Method Detection Limit
<b>MDA</b>	Minimum Detectable Activity
<b>MRL</b>	Method Reporting Limit

Any remaining sample(s) will be disposed of one month from the final report date unless other arrangements are made in advance.

An Absence of Total Coliform meets the drinking water standards as established by the California Department of Health Services.

The Reporting Limit (RL) is referenced as the Laboratory's Practical Quantitation Limit (PQL) or the Detection Limit for Reporting Purposes (DLR).

All samples collected by Weck Laboratories have been sampled in accordance to laboratory SOP Number MIS002.

#### GC/MS VOA

Method(s) 8260B: Due to the high concentration of Benzene, the matrix spike / matrix spike duplicate (MS/MSD) for analytical batch 560-133589 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Method(s) 8260B: The matrix spike duplicate (MSD) recovery for analytical batch 560-133589 were outside control limits for 1-octene. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC/MS Semi VOA

Method(s) 8270C: The laboratory control sample (LCS) for preparation batch 560-133681 and analytical batch 560-133691 recovered outside control limits for the following analytes: Bis(2-ethylhexyl) phthalate This analyte was biased high in the LCS and was not detected in the associated samples above the RL; therefore, the data have been reported. The MS/MSD had passing %R for all targets.

#### Metals

Method(s) 6010B: The method blank for preparation batch 560-133618 and analytical batch 560-133668 contained Ca above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### General Chemistry

Method(s) 9040C, SM 4500 H+ B: This analysis is normally performed in the field and has a method-defined holding time of 15 minutes. The following sample(s) has been qualified with the "HF" flag to indicate analysis was performed in the laboratory outside the 15 minute timeframe.

Method(s) 365.4: The method blank for preparation batch 680-456744 and analytical batch 680-457065 contained phosphorus above the method detection limit (MDL). Associated sample(s) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

Method(s) 365.4: Due to the high concentration of phosphorus, the matrix spike / matrix spike duplicate (MS/MSD) for preparation batch 680-456744 and analytical batch 680-457065 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

## Notes and Definitions

Item	Definition
MS-02	The RPD and/or percent recovery for this QC spike sample cannot be accurately calculated due to the high concentration of analyte inherent in the sample.
ND	NOT DETECTED at or above the Method Reporting Limit (MRL). If Method Detection Limit (MDL) is reported, then ND means not detected at or above the MDL.
Dil	Dilution
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference
% Rec	Percent Recovery
Source	Sample that was matrix spiked or duplicated.
MDL	Method Detection Limit
MRL	The minimum levels, concentrations, or quantities of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence. The MRL is also known as Limit of Quantitation (LOQ) and Detection Limit for Reporting (DLR)
MDA	Minimum Detectable Activity
NR	Not Reportable
TIC	Tentatively Identified Compound (TIC) using mass spectrometry. The reported concentration is relative concentration based on the nearest internal standard. If the library search produces no matches at, or above 85%, the compound is reported as unknown.

Any remaining sample(s) will be disposed of one month from the final report date unless other arrangements are made in advance.

An Absence of Total Coliform meets the drinking water standards as established by the California State Water Resources Control Board (SWRCB)

All results are expressed on wet weight basis unless otherwise specified.

All samples collected by Weck Laboratories have been sampled in accordance to laboratory SOP Number MIS 002.

## Narrative

### Job Narrative 560-62017-1

#### **Revised Report 2 07-25-2016**

There was an additional analyte listed on the list for Semi-volatiles (N-Nitrosodimethylamine). This analyte was removed and no other changes were made. Test America apologizes for any inconvenience this may have caused the client.

In the original report the pH did not pull into the report. The pH tests now show up in the report and Test America apologizes for any inconvenience this may have caused the client.

#### **Receipt**

The samples were received on 6/9/2016 9:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.4° C.

#### **Receipt Exceptions**

The following samples were canceled by the client on 06-13-2016 for TKN, TDS and TSS. 560-62017-1-7.

Some Methods have been substituted per client permission.

Due to concerns about insufficient volume, the client request that both Method 300 & Method 340.2 be analyzed has been put on hold. The lab has been instructed to place 340.2 on hold, and if any volume remains after all other methods have been analyzed, Houston should send the necessary 100 g to Corpus Christi for analysis.

Job 560-62017 had Dalpon on the analyte list for Herbicides by method 8151. The client was contacted on 06-20-2016 and informed that the Houston Test America can not run Dalpon. These samples were logged in under the incorrect project because the client used a different COC instead of the one sent to them with the sample bottles. Test America apologizes for any inconvenience this may cause the client.

#### **GC/MS VOA**

Method 8260: Percent recovery results for the MS/MSD pair, the MS or the MSD associated with sample 560-62017-4 were outside acceptable limits for various analytes. The LCS was within acceptable limits. Therefore, data are reported.

Method 8260: The relative percent deviation (RPD) was outside acceptable limits for various analytes in the MS/MSD pair associated with sample 560-62017-4. The LCS was within acceptable limits. Therefore, data are reported.

No additional analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### **GC/MS Semi VOA**

Method 8270C: Surrogate recovery for the following samples was outside control limits: HCS360 (560-62017-5) and FDHCS360 (560-62017-6). Re-extraction and re-analysis was performed with concurring results. The original analysis has been reported.

Method 8270: Percent recovery results for the MS/MSD pair, the MS or the MSD associated with sample 560-62017-4 were outside acceptable limits for various analytes. The LCS was within acceptable limits. Therefore, data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### **GC Semi VOA**

Method 8141A: The following samples were diluted due to the nature of the sample matrix: HCS310 (560-62017-1), HCS320 (560-62017-2), HCS330 (560-62017-3), HCS340 (560-62017-4), HCS340 (560-62017-4[MS]), HCS340 (560-62017-4[MSD]), HCS360 (560-62017-5) and FDHCS360 (560-62017-6). Elevated reporting limits (RLs) are provided. When run at a lower dilution the samples caused CCV failure. The matrix caused failed very low in the CCVs. The dilutions were also performed in order to protect the analytical instrumentation. Due to the dilution, the surrogate and matrix spike concentration in the samples were reduced to a level where the recovery calculation does not provide useful information.

Method 8141A: The continuing calibration verification (CCV) associated with batch 280-332552 recovered above the upper control limit for

The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following sample is impacted: (CCV 600-191143/24).

Method 8081B: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for preparation batch 600-190731 and analytical batch 600-191263 recovered outside control limits for the following analytes: Methoxychlor. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8081B: The continuing calibration verification (CCV) associated with batch 600-191263 recovered above the upper control limit for 4,4-DDT(22.8%) and Methoxychlor(39.1%). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The following sample is impacted: (CCVIS 600-191263/3).

Method 8081B: Compound ISTD eluted outside the retention time window on the RTX-CLPesticides II column for the following samples: (LCS 600-190731/2-A) and (MB 600-190731/1-A). This retention time shift was taken into account when reviewing the sample(s) for target compounds.

Method 8081B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 600-190731 and analytical batch 600-191263 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

### Laboratory: TestAmerica Corpus Christi (Continued)

Method 8081B: The matrix spike / matrix spike duplicate / sample duplicate (MS/MSD/DUP) precision for preparation batch 600-190731 and analytical batch 600-191263 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected.

Method 8081B: Compound ISTD eluted outside the retention time window on the RTX-CLPesticides 1 and RTX-CLPesticides II column for the following samples: HCS360 (560-62017-5). This retention time shift was taken into account when reviewing the sample(s) for target compounds.

Method 8081B: Compound ISTD eluted outside the retention time window on the RTX-CLPesticides II column for the following sample: FDHCS360 (560-62017-6). This retention time shift was taken into account when reviewing the sample(s) for target compounds.

Method 8081B: Surrogate recovery for the following sample was outside control limits: FDHCS360 (560-62017-6). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### Metals

Method 6010B: Due to the high concentration of Ca, the matrix spike / matrix spike duplicate (MS/MSD) for preparation batch 560-128926 and analytical batch 560-129037 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Method 6010: The relative percent deviation (RPD) was outside acceptable limits for various analytes in the MS/MSD pair associated with sample 560-62017-4. The LCS was within acceptable limits. Therefore, data are reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### General Chemistry

Method 300.0: The following samples were received outside of holding time due to some tests being on hold by the client due to insufficient sample volume: HCS310 (560-62017-1), HCS320 (560-62017-2), HCS330 (560-62017-3), HCS340 (560-62017-4), HCS360 (560-62017-5) and FDHCS360 (560-62017-6).

Method 300.0: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for Bromide preparation batch 600-191188 and analytical batch 600-191189 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### Industrial Hygiene

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

### Organic Prep

Method 3540C: The following samples could not be thoroughly homogenized before sub-sampling was performed due to sample matrix: HCS340 (560-62017-4), HCS340 (560-62017-4[MS]) and HCS340 (560-62017-4[MSD]). The sample was wet Shells.

analytical batch 280-330827

3540C 8141A

Batch: 330827

Method 3546: Due to the matrix, the following sample(s) could not be concentrated to the final method required volume: The samples 560-62017-5 and 6 would not blow down "concentrate" down to the desired 1 mL so I volumed up to the nearest clean mL during the organic prep. The reporting limits (RLs) are elevated proportionately.

Method 3546: Due to the matrix, the following sample(s) could not be concentrated to the final method required volume: The samples 560-62017-1, 1 and 4 would not blow down "concentrate" down to the desired 1 mL so I volumed up to the nearest clean mL during the organic prep. The reporting limits (RLs) are elevated proportionately.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

The following samples were canceled by the client on 06/13/16 for TDS & TSS: 560-62041-10 and 11.

Some Methods have been substituted per client permission.

Due to concerns about insufficient volume, the client request that both Method 300 & Method 340.2 be analyzed has been put on hold. The lab has been instructed to place 340.2 on hold, and if any volume remains after all other methods have been analyzed, Houston should send the necessary 100 g to Corpus Christi for analysis.

Sample 10 EB01 had two containers, P and Q which are amber one liters with about half of the volume in the container.

#### GC/MS VOA

Method 8260B: The following sample: HMSM350 (560-62041-5) was analyzed using less sample weight due to the internal standard failures in the original 1X analysis. Elevating reporting limits are provided.
